BOOKLEVER

Installation & use guide | Google Drive or GitHub

Books → Ideas → Mental models → Decisions → Action

Turn nonfiction books into clear takeaways, memorable visuals, and practical playbooks. Download the plugin from either source below. Both routes lead to the same installation steps.

Option A: Download from Google Drive

1. Open the Google Drive sharing link provided with BOOKLEVER.
2. Find or open **booklever-plugin.zip**. In a folder, right-click that file and choose **Download**; in a file preview, use the download icon or the file menu.
3. Save the ZIP to your computer. If Drive asks you to sign in or request access, use the intended Google account or ask the sender for access.

Option B: Download from GitHub

1. Open the GitHub repository provided with BOOKLEVER.
2. If the ZIP is in the file list, open **booklever-plugin.zip** and select the raw-file download control. If it is under **Releases**, open the release and download that asset.
3. Save the ZIP to your computer. Avoid **Code > Download ZIP**: it downloads the whole repository, which may not be an installable plugin package.

For either source: Keep the plugin ZIP intact. If your browser automatically extracts it, keep or download the original ZIP again. You only need one copy.

Install, then choose @

One setup. A simple start for every book.

Install the downloaded plugin

Use ChatGPT on the web with an account/workspace that permits plugin uploads. Eligible workspace owners or administrators can open **admin.openai.com**, select the intended workspace, then choose **Plugins > Add > Upload plugin**. Upload **booklever-plugin.zip** and follow the prompts. Other eligible users should use the upload option available to their account. [1]

Once available, open the plugin directory, find **BOOKLEVER** or **BOOK → LEVER**, and select **Install** or the plus button if offered. Start a new chat after installation. [2]

1 Type the @ symbol

Click the message box and type **@**. Search for **BOOKLEVER** or **BOOK → LEVER**, then select the installed plugin from the results. Selecting the result attaches the plugin to your request. [2]

2 Type only the book title and author

With the plugin selected, enter the title and author, then send. You do not need to write a special command or a long prompt.

> Clear Thinking by Shane Parrish

3 Read the Top 10

BOOKLEVER starts with **The 10**: an overview, the big idea, ten ranked takeaways with explanations and applications, and a master framework connecting the ideas.

If something is missing

No upload option? Ask your workspace administrator to upload the ZIP or provide an approved installation route. Attaching the ZIP to a normal chat does not install it.
No @ result? Check the plugin is installed in the selected account/workspace, then start a new chat and try again.
ZIP rejected? Verify you downloaded the plugin asset, then share the validation error with the publisher.

How the conversation flows

Book & author → Top 10 → Infographic → Deep dive → PDFs → Apply

1 Name the book and author

Type @, select the installed BOOKLEVER plugin, then send the book title and author. For example: **On Good Authority by Anna David.** The first response gives the Top 10, the big idea, and a master framework. In this example, that framework was the **Authority Engine**.

2 Choose “Create the infographic”

After the first response, choose the infographic next-step option or type a request. The visual should include all ten takeaways and the named framework, rather than just a decorative book image.

> Create the detailed BOOK → LEVER infographic for On Good Authority by Anna David, including all 10 takeaways and the Authority Engine.

3 Continue into the deep dive

After the infographic, choose the Full LEVER deep-dive option or ask for it in the same conversation. This expands the ideas into practical actions, examples, an implementation playbook, and application material. Full LEVER can also include critique, a memory map, and short verified quotes when sources allow.

> Give me the Full LEVER deep dive for this book.

4 Ask for the two PDFs

Request a PDF of the first part and a separate PDF of the deep dive. You can combine the deep-dive and export requests in one message, as in the recent On Good Authority conversation. If the deep dive has not been written yet, explicitly ask to create it as well as export it.

> Give me a PDF for the first part and for the deep dive - two different ones. Create the Full LEVER deep dive first if it is not already complete.

5 Apply the ideas to your situation

Continue in the same chat: ask for a business playbook, a checklist, or help building something specific. For example, after the Fletcher Method breakdown, the follow-up was to ask questions and help write the actual script.

Follow the conversation: The first response may offer infographic, deep dive, and application together. The usual path above is a practical sequence, not a locked menu. Buttons may appear as written choices; you can always type the next request.

Several books in Work mode

Use independent Work chats to keep multiple books moving at once.

Choose **Work** using the Chat/Work selector where available. In the desktop app, the selector is above the composer. Work supports multi-step tasks; separate chats can run independent tasks in parallel. Availability and active-task limits depend on your account. [3, 4]

1 Start one Work chat per book

Create a new Work chat, type @, and select BOOKLEVER. Name the chat after the book if helpful. Repeat in another Work chat for each additional title. Start with two or three books so the results are easy to review.

2 Request all three outputs up front

Paste the prompt below in each book's chat, replacing the title and author. Explicitly requesting the full sequence lets the plugin continue through the steps without waiting for you to choose each next-step option.

> Process [BOOK TITLE] by [AUTHOR] using BOOKLEVER. Create: 1) The 10, 2) a detailed infographic with all 10 takeaways and the master framework, and 3) the Full LEVER deep dive with practical actions, caveats, a memory map, and verified quotes where available. Complete all three in that order without pausing for next-step confirmation. Keep every output labeled with the book title. Export The 10 and the deep dive as separate PDFs and provide the infographic image. Flag any unavailable sources or tools.

3 Launch the next book while the first runs

Once the first task is running, open the next Work chat and send its book-specific request. Each chat keeps its own conversation and outputs. Return to each chat to check progress, answer any necessary question, and download completed files. [4]

Alternative: one batch request

In one Work chat with BOOKLEVER selected, list several titles and authors, then ask for the same three outputs **for each book**. Add: **Keep books separate and complete every requested stage without pausing between stages.** Work may process them sequentially or concurrently; one batch prompt does not guarantee parallel execution.

Review before sharing: Check title/author matches, infographic readability, and quotation sources. If image generation is unavailable, ask to finish the written outputs and identify the missing image.

Example infographic: 1 of 2

Think and Grow Rich by Napoleon Hill

The Top 10 and the Desire → Direction → Delivery framework. Zoom in to read the details.

Example infographic: 2 of 2

Think and Grow Rich by Napoleon Hill

The six fears, the original 13 principles, and additional key ideas. Zoom in to read the details.

Prompts in conversation order

Use these after selecting BOOKLEVER with @.

1. Start with the book

“On Good Authority by Anna David.” The plugin starts with the Top 10; no extra command is needed.

2. Request the infographic

“Create the detailed BOOK → LEVER infographic for this book, including all 10 takeaways and the master framework.” Use the framework name when known, such as Authority Engine.

3. Expand to the deep dive

“Give me the Full LEVER deep dive.” For just one takeaway, use “Deep Dive #3” instead.

4. Export the first part and deep dive

“Give me a PDF for the first part and for the deep dive - two different ones.” Specify whether the first PDF should also include the infographic image.

5. Put the ideas to work

“Ask me the questions you need, then help me apply these principles to my business.” For a script-building framework: “Ask me all the questions, then help me write the script using these principles.”

Updates and troubleshooting

Missing next-step button: Type “Create the infographic” or “Give me the Full LEVER deep dive.” The next-step invitation may appear as text instead of a clickable button.
Task waiting for you: Answer the question in that book's chat, or restate that all three stages are already requested.
Update the plugin: For a manually uploaded copy, open its details and select **Upload new version** when available and permitted. Downloading a new ZIP from Drive or GitHub does not update the installed copy. [1]

Source access matters

Precise details and verified quotes depend on source access; provide authorized excerpts when needed. Download links and the plugin ZIP were not supplied for inspection.
